

Objective

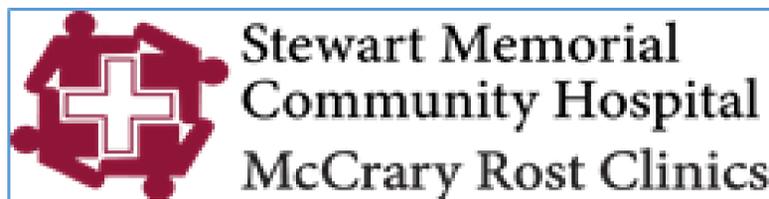

Increase the percentage of annual wellness visits being done on our Medicare patient population.

Background

If we increase the percentage of annual wellness visits being done we in turn decrease our care gaps and provide better patient care. This also helps us to meet the ACO goals which has a positive financial impact on the facility. Expected threshold = > 60%

Actions Taken

Monthly monitoring and reporting to providers and front-line clinic staff. Education provided to set expectations and explain the importance of scheduling annual wellness visits.

Total Wellness Exams by Provider

Next Steps

We will continue to push our providers and front-line clinic staff to schedule wellness visits for our Medicare population. Monthly reports sent to providers for any providers not meeting target with a list of patients not scheduled.
